WORK EXPERIENCE

MicrometreUK

Lead/Full Stack Developer

2022 - Present

Lead development of an Automatic Number Plate Recognition (ANPR) system as a service (microanpr.com). Automated manual data entry of vehicle presence, eliminating human error. Spearheaded migration of on-premises servers to AWS cloud, leveraging EC2 and S3 for a substantial reduction in infrastructure costs.

Developed Computer Vision pipeline using PaddleDetection, PyTorch, and OpenCV for license plate recognition.

- Built image preprocessing pipeline with OpenCV for noise reduction, contrast enhancement, and edge detection.
- Implemented deep learning models for accurate plate detection and character recognition.
- Created comprehensive technical documentation and tutorial series on ANPR implementation.

Designed a Python/Flask backend with Redis and a React frontend.

- Integrated the React frontend with Python/Flask backend using RESTful APIs.
- Developed responsive user interface with React, enhancing user experience.

Developed Ansible roles to automate deployment across multiple environments.

- Automated the deployment of the React frontend and Python/Flask backend using Ansible roles, enabling continuous integration and delivery.
- Eliminated manual configuration errors and ensured consistent deployments across all environments.
- Increased system reliability and reduced downtime through automated configuration management with Ansible.

Leveraged Redis with SSE(Server-Sent Events) to provide instant updates without the need for constant

- Implemented a Redis Pub/Sub channel to broadcast parking activity updates from the backend.
- Developed an SSE endpoint in the Python/Flask backend to push updates to connected clients.
- integrated client-side JavaScript/React to handle incoming SSE events and update the user interface dynamically.

Utilized pandas to clean and process ANPR data, removing duplicates, correcting errors, and standardizing formats for subsequent analysis

- Improved the accuracy of ANPR data analysis by cleaning and processing the data with pandas.
- Facilitated data sharing by exporting processed ANPR data to CSV, Excel, and JSON formats using pandas.

Developed cross-platform desktop applications with Electron and mobile apps with Ionic Framework, seamlessly

- Utilized RESTful APIs to enable communication between the Electron/Ionic apps and the Flask backend, facilitating real-time data exchange and ANPR functionality.
- Leveraged Electron and Ionic to create native apps for multiple platforms (Android), expanding the reach of the ANPR service and increasing user accessibility.

Built a low-power SoC IoT camera using an Arduino ESP32, integrating a camera module for video

- Designed the hardware and firmware for a SoC IoT camera using an ESP32 microcontroller, integrating a camera module for video capture and Wi-Fi for network connectivity.
- Leveraged the ESP32's built-in Wi-Fi capabilities to enable wireless video streaming.
- Integrated the camera with a cloud platform for remote access, live streaming, and storage of video footage

Integrated real-time video streaming using FFmpeg and OpenCV into the ANPR system, enabling continuous monitoring and analysis of vehicle traffic.

- Utilized FFmpeg and OpenCV to create a video streaming pipeline that feeds live footage into the ANPR system for immediate number plate recognition
- Leveraged FFmpeg to efficiently encode and stream video data from the ESP32 camera to the ANPR system, minimizing latency and bandwidth consumption

Freelance/Self Employed

Full Stack Web Developer

2020 - 2022

Developed e-commerce websites, landing pages, and blogs for clients across various industries.

- Built custom solutions using WordPress, React, and Next.js from initial concept to deployment.
- Provided domain registration, email hosting, website design, and ongoing maintenance services.
- Improved website performance using Edge Computing and optimization techniques.
- Conducted comprehensive audits for performance, accessibility, and SEO using Google Lighthouse.
- Implemented custom features including store locators and interactive maps using Google Maps API.

Projects

2020 - Present

1. **Browser-Based AI Chat (WebLLM)** - Built a 100% client-side AI chat application using WebLLM and WebGPU with zero server dependencies.
 - Implemented WebGPU for hardware-accelerated AI inference directly in the browser.
 - Demonstrated modern JavaScript and AI/ML integration techniques.
1. **Daily Cashier** - Privacy-first sales management system using WebAssembly and SQLite.
 - Built offline-first application with OPFS (Origin Private File System) for persistent client-side storage.
 - Developed with Next.js and SQLite WASM, requiring zero server dependencies.
1. **RAG Quiz System** - Retrieval-Augmented Generation implementation using Ollama.
 - Integrated embeddings and language models for intelligent question-answering.
 - Built with Python for backend processing and vector storage.
1. **DevOps & Infrastructure Projects**
 - Developed Ansible roles for automated WireGuard VPN deployment and event-driven infrastructure.
 - Configured Kubernetes clusters (kubeadm, Microk8s) with Calico/Flannel networking and Nginx Ingress.
 - Built custom Debian/Linux distributions using Packer for consistent development environments.
 - Set up private Docker Registry and Gitea instances on AWS, Azure, and GCP.
 - Implemented Nginx/HAProxy reverse proxy with SSL termination and Fail2ban security.
 - Created monitoring systems with Monit, Crontab, and Git for configuration tracking.

TECHNICAL SKILLS

Languages	Python, JavaScript/TypeScript, Golang
Frontend	React, Next.js, Astro, Tailwind CSS, Framer Motion
Backend	Flask, Node.js, Express, REST APIs
Computer Vision	PyTorch, TensorFlow, OpenCV, PaddleDetection
AI/ML	WebLLM, RAG, Ollama, Embeddings
Databases	MySQL, Redis, MongoDB, SQLite (WASM)
Cloud Platforms	AWS, Google Cloud Platform, Microsoft Azure
DevOps	Ansible, Docker, Kubernetes, Nginx, HAProxy
Tools	Git, Packer, Vagrant, FFmpeg

CERTIFICATIONS

FreeCodeCamp	Responsive Web Design
FreeCodeCamp	JavaScript Algorithms and Data Structures

EDUCATION

<i>South Thames College</i>		<i>London, UK</i>
Diploma	Information Technology	
GCSE	Triple Science (Biology, Chemistry, Physics), English, Maths
